

For Task 1,

I created a digital literacy awareness infographic using Canva. The main objective of this task was to design a visual resource that helps students understand the importance of digital literacy in today's digital world. In my infographic, I included key topics such as the meaning of digital literacy, useful digital tools for students, safe internet practices, email etiquette, and professional online presence. I used simple language, icons, and a structured layout to make the content easy to

understand and visually appealing.

While working on this task, I explored various design templates and features available in Canva, which made the design process more creative and engaging. One interesting aspect was learning how to present important information in a limited space without making the infographic look crowded. However, the most challenging part was selecting relevant points and organizing them effectively within a single page.

Overall, this task helped me improve my creativity, design skills, and understanding of digital literacy. It also made me realize the importance of using digital tools responsibly and maintaining a professional presence online.
