

Platforms Chosen

For this task, I created and updated my profiles on three platforms: GitHub, LinkedIn, and Kaggle. These platforms are widely used by students and professionals to build a strong digital presence and showcase their skills.

Purpose of Each Platform

GitHub is mainly used for sharing coding projects and technical work. It helps in building a portfolio that can be shown to recruiters and professors.

LinkedIn is a professional networking platform where students can connect with industry experts, learn about job opportunities, and build a professional identity.

Kaggle is a platform for data science and machine learning. It provides opportunities to practice with datasets, participate in competitions, and improve analytical skills.

Future Plans

In the next four years, I plan to regularly update my profiles on all three platforms. I will upload my projects on GitHub, connect with professionals on LinkedIn, and practice data science skills on Kaggle. This will help me improve my knowledge, gain experience, and prepare for internships and placements.
